INTERNET CAFE

CREATING VITAL ADDITIONAL MODERN
LIVING SOLUTIONS

Architectural Outfitting
Specialist Services

Client: Chevron

Vessel / Platform: Captain WPP

The Challenge

To upgrade the platform's living area to include a communications zone for the workforce. This new area had to be engineered inside the existing space assigned to living quarters.

The Solution

Release of non-essential office space provided potential quiet zones for the design of an internet café.

The core services of ventilation, lighting, power and data systems already existed, so re-routing and re-allocation were required.

Dense acoustic material was added to the existing floor, walls and ceiling combined with the addition of a cross-talk attenuator within the HVAC system.

Bespoke furniture was designed to house compact PC's, flat screens and conceal essential cabling.

Mood lighting was also installed to improve the general comfort of the end users.

The Outcome

Bilfinger Salamis UK designed and constructed a bespoke recreational communications area within a quiet zone of a modern living space, providing the required DB levels for a relaxing environment.
