

01

01- The new layout made better use of the space, with new fixtures, fittings and flooring

The Challenge

The client wished to enhance workforce welfare, by refurbishing the platform lounge and muster area. The project needed to be completed within a busy environment in a safe and timely manner, with minimum disruption. The area had to be designed and built in a manner which would stand the test of time, whilst remaining functionally efficient and aesthetically pleasing.

The Solution

Following discussions with the client, it was decided that Bilfinger Salmis would create three distinct areas:

- A soft seating area / TV area.
- A main recreation space and muster point.
- An internet and gaming zone.

The final design had to be practical from a maintenance point of view and provide an optimum solution for life cycle upkeep of the asset. All internal finishes were of the highest standard with new flooring, wall decoration and furniture, fixtures and fittings.

The Outcome

Bilfinger Salmis UK's architectural team transformed the former lounge and muster area into separate zones where the workforce could spend their down time. Our team was praised by the client for the clean lines and modern design which created better usage of the room. The client was impressed that work was completed safely and on time, with minimum disruption to the workforce.
